

Making Campus Communities Safer

The Leader In Real-Time Gunshot Detection and Alerting

Introduction

During a gunfire incident, critical time can be lost as school personnel first seek to establish the nature of the attack—and, indeed, if there is an attack in the first place. Further, on-site personnel may be unable to alert 9-1-1 or trigger internal alerts because they are fully engaged in protective actions or are themselves under attack.

One of the most intractable problems associated with gunfire incident scenarios is that most people will not recognize the sound of gunfire when it first happens. Schools by their very design attenuate sound, making it extremely difficult for civilians with limited exposure to firearm discharges to make an immediate, experienced assessment of the threat.

ShotSpotter SecureCampus provides first responders with a proven system that detects gunfire and notifies campus or local law enforcement in less than 60 seconds from trigger pull. This removes critical minutes from response times and provides first responders with important tactical information they need to quickly mitigate and eliminate a threat.

Alerts include the precise location and number of shots fired, number of shooters, possible automatic weapons and direction of travel.

With ShotSpotter, you have the best intelligence to quickly and effectively resolve the incident and keep people safe.

SecureCampus Technology

SecureCampus is an early warning system based on ShotSpotter's proven gunfire detection system used in more than 90 cities. It is designed to protect your community whether they're on campus or in the surrounding area.

SecureCampus instantly detects gunfire and notifies those who need it most: campus security personnel, on-site staff, and law enforcement first responders.

Outdoor Protection

- SecureCampus is the only gunshot location technology capable of detecting threats both on campus and the surrounding area.
- SecureCampus has the ability to provide fully contextualized alerts within 60 seconds (number of rounds fired, the GPS location of gunshots, and audio files of the event) to designated recipients such as public safety dispatch centers, a variety of mobile platforms utilized by first responders, on-site staff, and key organizational personnel.

24x7 Monitoring Service

24x7 Monitoring Service sends verified alerts to first responders, providing them with important context for critical situational awareness.

Security System Integration

A number of associated and related technologies—cameras, access controls, PSIM—can be integrated to provide a 360-degree solution for end users. Contact ShotSpotter for more details.

SecureCampus is like a fire alarm in a gunfire incident: offering a life-saving time advantage in an active shooter incident. That time advantage can mitigate damages and save lives.

SecureCampus

Features

Benefits

SecureCampus is the only gunshot detection system that addresses gunfire near or on a campus.	Complete 24x7 protection of entire campus environment.
Automatic alert to verified gunfire incidents.	First responders alerted to verified gunshots in real-time, allowing faster incident response.
Verified alert provides number of rounds fired and audio clip of gunfire.	Increases situational awareness for first responders.
Acoustic experts analyze and verify alerts in 24x7 Monitoring Center and provide additional incident context to first responders.	Increases situational awareness by providing confirmed gunfire and incident context.
Mobile alerting capability.	Mobile communication keeps all campus and law enforcement personnel aware of live shootings.
SecureCampus integrates with other security technologies such as cameras, access controls, and SIMs.	Get the full picture — automate actions of your related security solution such as cameras panning, tilting and locking.
SecureCampus made by ShotSpotter, world leader in gunshot detection technology.	Over 90 cities trust and rely on ShotSpotter for accurate gunfire detection, location and forensic analysis today.
