

The First End-to-End Precision Policing Platform™

DATA-DRIVEN TOOLS TO MORE EFFICIENTLY AND EFFECTIVELY RESPOND TO, INVESTIGATE AND PREVENT CRIME.

GUNSHOT DETECTION

ShotSpotter Respond™

Gun violence in America's cities is a devastating epidemic. It has killed more than 80,000 Americans and injured over 150,000 in the last five years. A surprising fact is that gunfire is severely under reported—more than 80% of incidents are not reported. As a result, police cannot respond and communities believe that police do not treat gunfire as a priority.

With ShotSpotter Respond, police become aware of essentially all gunshot incidents. The system detects, locates and alerts police to gunfire in less than 60 seconds using a network of acoustic sensors across a coverage area. This enables a new normal where police can provide a consistent, rapid and precise response to aid victims, collect evidence and better serve their communities. It doesn't take long for perceptions to change among the community, with increased trust in law enforcement to protect and serve them.

CASE MANAGEMENT

ShotSpotter Investigate™

For investigative case management, police departments have traditionally relied on under-powered RMS modules and homegrown or manual systems. These approaches lack the analytics, collaboration tools and workflow engine detectives need to solve cases quickly. As a result, clearance rates suffer, and serial offenders remain free to commit more crime.

ShotSpotter Investigate is a cloud-based case management solution that helps law enforcement agencies capture, track and collaborate on investigations in one place. The platform's investigative, analytic and reporting tools make detectives more efficient and effective – from the office or the field – helping you keep investigations moving forward. As a result, law enforcement agencies of any size can better protect the community and achieve higher clearance rates, especially for violent crimes and shootings.

PATROL MANAGEMENT

ShotSpotter Connect™

Visible patrolling in the right places for the right amount of time can be an effective deterrent to crime. But having the knowledge of exactly where to position patrols during a shift and how to avoid over- or under-policing an area is key to improving public safety.

ShotSpotter Connect is a patrol management solution that uses artificial intelligence-driven analysis to ensure officers are in the locations with the highest risk of crime for a particular day and time. It mitigates bias by managing time spent in the area and recommending a set of tactics most appropriate for the crime likely to occur. The system also gives command staff better visibility into whether officers completed their patrol assignments and the tactics they used during that time—all in an effort to hone the best strategies for reducing overall crime.

Security Solutions

ShotSpotter security solutions provide outdoor gunshot detection to protect staff, visitors and physical assets from active shooters and neighborhood gun violence. The system provides notification of an event along with a precise location in less than 60 seconds, enabling local law enforcement and security to mitigate the threat and direct people to safety.

SiteSecure™ protects facilities such as corporate campuses, retail stores, government buildings, highways, state capitals and other facilities.

SecureCampus® protects universities and colleges.

ShotSpotter Labs

ShotSpotter Labs develops innovative uses of gunshot detection technology to help protect wildlife and the environment. ShotSpotter gunshot detection is deployed in Kruger Park, South Africa, home to the largest remaining population of protected rhino, and has helped reduce poaching.
