

ShotSpotter Gun Crime Management (GCM)

In our experience working closely with the ATF and CGIC units across the country, we recognize that there are four key components involved in an evidence-based approach to solving gun crime. These include:

- 1. Comprehensive Collection**
- 2. Timeliness in Actions and Information**
- 3. Investigative Follow-Up**
- 4. Feedback and outcomes**

However, our partners recognize that there are currently major challenges, particularly in managing workflows that solve for investigative follow-up and feedback. Due to the difficulties involved in managing NIBIN leads manually in an RMS as well as in Excel spreadsheets, agencies can struggle to leverage collected NIBIN evidence. This leaves them unable to tie evidence together, track activities, or gain insight into resource allocation, which can result in lower clearance rates and higher levels of burnout.

ShotSpotter Gun Crime Management (GCM) is here to solve this. An extension of your Respond application, this solution makes it easier for you to collaborate with internal and external stakeholders as well as capture and quantify key information needed for a successful outcome.

WITH SHOTSPOTTER GUN CRIME MANAGEMENT YOU CAN:

-  **Enrich** the data collected at a shooting incident

-  **Capture** details around Respond alerts for future analysis and reporting

-  **Manage** NIBIN Leads generated from a shooting incident

-  **Track** investigative processing and follow-up assignments

-  **Automate** NIBIN lead capture

-  **Gather** insight into your gun crime unit's workload and effectiveness via reporting and data visualizations

-  **Generate** monthly statistics to support grant reporting requirements
